Work-family conflict and burnout among Chinese female nurses: The mediating effect of psychological capital

Dear editor,

It was a pleasure to read this clear report of this interesting study among Chinese female nurses. It is well written, methods are appropriately described and as far as I can judge, it is based on good quality data. It is a cross sectional study and based on self reported data, though I think the authors describe these limitations well. I think this study should be published.

Kind Regards,
Inger Plaisier, PHD
