Reviewer’s report

Title: Predictors of antibiotics co-prescription with antimalarial for patients presenting with fever in rural Tanzania

Version: 3 Date: 19 April 2013

Reviewer: Victor Lara

Reviewer’s report:

Major Compulsory Revisions
- expand discussion on predictors of antibiotics. use figure 2 and explain if predictors were different in the 3 groups
- expand conclusion on predictors and implications for each group of figure 2

Minor Essential Revisions
Final editing

Discretionary revisions
- expand recommendations, especially those that are related with the predictors for each category using AL + Antibiotics in figure 2. therapeutic and programmatic implications seems different for each group.
- some of the comments in the first part of the conclusions are not very related with the predictors of Antibiotic use but on use of antimalarials, suggest to reduce

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
