Reviewer's report

Title: Prevalence and risk factors for drug resistance tuberculosis in northeastern China

Version: 1 Date: 28 October 2013

Reviewer: Jessica L de Beer

Reviewer's report:

I think that every surveillance report is interesting, but it is important to compare the results to other findings and describe the relation to factors like treatment availability, specific conditions, etc. Than this report about prevalence in China is more interesting to read.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
