Reviewer's report

Title: Altering micro-environments to change population health behaviour: towards an evidence base for choice architecture interventions

Version: 2 Date: 12 November 2013

Reviewer: Susan Michie

Reviewer's report:

This paper is much improved and I am satisfied that the reviewers' comments have been addressed. There is one sentence that is difficult to follow and would benefit from clearer wording/construction and being split into two

"We excluded interventions that involved the use of economic instruments (e.g. taxes, subsidies, income transfers) without including other components that met the operational definition, in line with prior formulations of choice architecture [3] (we conducted a concurrent scoping review of the effects of economic instruments on diet and physical activity, reported elsewhere [28])."

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
