Reviewer's report

**Title:** A blind area of family planning services in China: unintended pregnancy among unmarried graduate students

**Version:** 2  **Date:** 1 September 2012

**Reviewer:** qiaoqin ma

**Reviewer's report:**

the manuscript has been greatly improved, and I suggest that it be accepted after some revision.

**Major compulsory:**

1. In the “sampling” of study section, the author should explain the number of all unmarried graduate students in these classes recruited, then compute how many student participate in the research. As well, the author should explain how the classes are sampled in detail, for example, the exact proportion of disipline, and whether the proportion is the same or similar in diferent university and city..

**Minor essensial revision:**

1. the research time should be the same in “background” section and “method” section.

2. In “Study Setting and Participants”, I could not find the description of participants, thus the title should be “Study Setting”?

3. I still believe that the denominator should be the students sexually active for the rate of unintended pregnancy and abortion.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests
