Reviewer's report

Title: Prevalence of intestinal parasitic infection and risk factors among schoolchildren in University of Gondar community school, Northwest Ethiopia: a cross-sectional study

Version: 4 Date: 20 December 2012

Reviewer: Yvonne Ai Lian Lim

Reviewer's report:

The manuscript attempts to assess the prevalence of intestinal parasitic infection and associated risk factors among schoolchildren in Ethiopia. The authors have made the effort to improve the manuscript. Based on the current version, I am still on the opinion that the present findings are important especially for the local scene and therefore it is suggested it would be more appropriate to publish in a local or regional journal. In addition, there are still mistakes on the species name of parasites and some grammatical errors.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: Yes, and I have assessed the statistics in my report.
