Reviewer’s report

Title: Factors Associated with HIV Infection among Men Who Have Sex with Men in Henan Province, China: A Cross-Sectional Study

Version: 1 Date: 26 September 2012

Reviewer: Roger Detels

Reviewer’s report:

1. the internet is the major source of meeting partners for sex among MSM. No information is solicited regarding use of the internet and it was apparently not used for recruiting.

2. Please confirm that the questionnaire was self-administered.

3. Where and under what circumstances was the questionnaire administered?

4. What tests were used to identify HIV antibodies and active syphilis infection?

5. Need additional details of analysis. For example what were the criteria for entry into mutivariate analysis?

6. The authors should separate the associations with HIV infection into those which were associated with higher risk and which were associated with lower risk.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
