Reviewer's report

Title: Prevalence of health-risk behaviours among Canadian post-secondary students: Descriptive results from the National College Health Assessment

Version: 1 Date: 18 December 2012

Reviewer: Adamson Muula

Reviewer's report:

Thank you for giving me the opportunity to review this manuscript. I found the manuscript well written and concise. The main negative criticism is that I found that the authors have not spent enough time to explain, or try to explain the key findings from this study. The Discussion section is rudimentary in my estimation. I also find the author referring to "prevalence rates" when prevalence is not a rate.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
