Re: Sleep duration of underserved minority children in a cross-sectional study
MS 1651376446901367

This revised version has improved and tackled most of the queries that were raised before. In particular, the authors have increased the emphasis on the public health implications of inadequate sleep in the discussion section. There is only one minor issue that might further improve the article.

1. In both methodology (pg 6-7) and discussion (pg10-11) sections, there were lengthy and repeated over-elaborations on the comparisons among different objective sleep measurements (actical, actiwatch and PSG). The authors should be more concise and avoid repeating the messages - Actical is a valid ambulatory sleep measurement.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
