Reviewer's report

Title: A pilot study comparing two weight loss maintenance interventions among low-income, mid-life women

Version: 2 Date: 14 June 2013

Reviewer: Perry Foley

Reviewer's report:

This manuscript reports the outcomes of a 12-month weight loss maintenance intervention conducted within a low-income, middle-aged female population. As the authors point out, lower-income women are not well represented in weight loss trials, and this study aims to test two pilot weight loss maintenance interventions amongst this high-risk population. The weight maintenance phase of the Weight-Wise program contributes interesting and meaningful data to the weight loss maintenance literature and, with the edits and improvements that the authors have included thus far, I would recommend this manuscript for publication.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
