Reviewer's report

**Title:** High burden of hepatitis B infection in Northern Uganda despite nine years of childhood hepatitis B vaccination: results of a population-based survey.

**Version:** 2 **Date:** 10 February 2013

**Reviewer:** Elisabetta Franco

**Reviewer's report:**

The Authors accepted almost all the suggestions of the reviewers, making the appropriate changes and now the paper can be published.

I would suggest to change the title of the article, in fact the paper describes the present situation of HBV infection in Uganda before an effect of the vaccination programme can be seen.

If data is available, it might be useful to show the vaccination coverage in Northern Uganda: from the figures of the present study, in fact, it seems to be not higher than 30%.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests' in relation to this paper
