Reviewer's report

Title: Prevalence of cardiovascular risk factors and socioeconomic level among public-sector workers in Angola

Version: 1 Date: 24 January 2013

Reviewer: Annamarie Kruger

Reviewer's report:

Minor Essential Revisions

Thank you for the opportunity to read this manuscript. I am excited about the fact that data is coming from Africa on this topic.

The publication: Prevalence of cardiovascular risk factors and socioeconomic level among public-sector workers in Angola fulfil a gap in knowledge on this topic in Africa. I have indicated with track changes on the document (included) some comments and issues that should be address by the authors.

In general I personally think the result section is too extensive. Many of the words can be cut as it is visible from the tables. Attention can be given only to significant results and results of importance. In the discussion section I also suggest the authors should prevent duplication of information discussed.

This work should be published, but the document as it is should be revised.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
