Reviewer's report

Title: Suicide and Related Health Risk Behaviours among School Learners in South Africa: Results from the 2002 and 2008 national Youth Risk Behaviour Surveys

Version: 1 Date: 16 May 2013

Reviewer: Albert Lee

Reviewer's report:

For presentation of results of multiple regression, it will be more user friendly for readers if the investigators can present the Odds ratio with 95% confidence interval. This would also enable easy interpretation of the degree of association

Suggest to have few solid recommendations in conclusion session.

It is an important paper of public health significance
