Reviewer’s report

Title: Khat chewing among Ethiopian university students - a growing concern

Version: 4 Date: 12 May 2014

Reviewer: John Martin M Corkery

Reviewer’s report:

Major Compulsory Revisions

None of the suggested revisions in terms of corrections to language, syntax, spellings and punctuation seem to have been heeded or made.

The revisions to the text in response to the reviewers’ comments are not clearly written or fully thought through. Again, as with the earlier the language, syntax, style etc all need improving.

I would suggest getting a native English speaker to read through this version!

I would be happy to check a further draft.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: Yes, and I have assessed the statistics in my report.
