Reviewer’s report

Title: Khat chewing among Ethiopian university students - a growing concern

Version: 5 Date: 18 July 2014

Reviewer: Mohamed Mahfouz

Reviewer’s report:

Major Compulsory Revision.

The sampling issue is still NOT clear, the information provided by authors further complicated the picture, for example authors mentioned that they used single population formula to determine prevalence and again they said that they use two population formula to identify factors across year of study?????????. Also assumptions mentioned were not logical. It looks that you are stating hypothesis. Please consult statistician for this matter.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
