Reviewer’s report

Title: Patterns of clustering of six health-comprising behaviours in Saudi adolescents.

Version: 4  Date: 22 October 2014

Reviewer: Richard Tahtinen

Reviewer’s report:

The authors have made good amendments to the new manuscript. The paper is well written and provides a good foundation for further studies within its field.

Major Compulsory Revisions
None

Minor Essential Revisions
None

Discretionary Revisions

Even though mentioned in the discussion, it could be beneficial for the readers if the authors would include a few references already in the introduction on studies that have; “focused on a limited number of behaviours at a time, with most studies looking at the clustering of two behaviours...” (p.4, row 121-122)

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
