Reviewer's report

Title: Lower Vitamin D Status is More Common among Saudi Adults with Type 1 Diabetes Mellitus than Non-Diabetics

Version: 2  Date: 11 December 2013

Reviewer: George P Chrousos

Reviewer's report:

More info on the 25OH-vit D assay is needed. Does it fully crossreact with D2 and D3?

What is the explanation of the results? One would have expected the opposite results as DMT1 patients are regularly followed by their physicians.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I know personally two of the authors and have collaborated and published with them.
