Reviewer's report

Title: Assessment of prevalence of intestinal parasitosis and associated risk factors among primary school children in Chencha town, Southern Ethiopia.

Version: 4  Date: 8 January 2014

Reviewer: Gordon Nichols

Reviewer's report:

The following still needs changing:

“Toilets with no hand washing setup in the households had the higher the likelihood of the children to be infected with IPIs than those who had the facilities (Odds ratio 1.306; 95% CI 0.788 to 2.163) (table 4).” This result is not statistically significant, as indicated in the table, so the text needs to be changed.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
