Reviewer’s report

Title: Vaccination coverage and its determinants among migrant children in Guangdong, China

Version: 1 Date: 21 January 2014

Reviewer: Daniela Amicizia

Reviewer’s report:

Discretionary revisions

The study investigates the low vaccination coverage in migrated subjects, in particular describes the estimates of the complete and age-appropriate immunization coverage and risk factors of migrant children in Guangdong, China. The study results could have significant implications for planning prevention and control strategies against low immunization rates of migrant children. The manuscript is well written and the question well posed, the methods are appropriate.

The authors could add some sentences and references on the low coverage rate in immigrant children in others countries, giving a global perspective to their manuscript.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
