Reviewer’s report

Title: Mothers impose physical activity restrictions on their asthmatic children: an analytical cross-sectional study

Version: 1 Date: 10 February 2014

Reviewer: Herberto Jose J. Chong Neto

Reviewer’s report:

Major Compulsory Revisions: Table 2 should appear just "yes" response as an exactly number followed by (%). It will became reading more easy. Eliminate negative response as "no", <5, <9, etc…

As a reader, I would like to known why other variables were not used in the univariate and multivariate analysis: gender, weight, BMI, medication use, family income? This variables could be influenced to the others evaluated?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
