Title: Risk factors of diarrheal disease in under-five children among health extension model and non-model families in Sheko district rural community, Southwest Ethiopia

Version: 4 Date: 28 November 2013

Reviewer: Aderaw Anteneh

Reviewer’s report:

Major Compulsory Revisions
I have seen much improvement in the paper. However, I have a few comments on it.

1. In the previous document it was stated that the contribution of climate zone, availability of latrine,............. are not associated with diarrhea and contrasted with other studies, in their discussion it was also stated that “This might be due their contribution to the occurrence of childhood diarrhoea was small in comparison to other variables”. Based on this I gave a comment that “why the contribution might be small compared with other variables?” However, in the present document I can’t find all these. You were not asked to delete it rather to discuss it deeply. Please try to address it accordingly.

Minor Essential Revisions
The reference numbered [16] is in the reference list but I can’t find it referred in the body of the document. Please check it

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
