Reviewer: Digsu Negese Koye

Reviewer's report:

Risk factors of diarrheal disease in under-five children among health extension model and non-model families in Sheko district rural community, Southwest Ethiopia: comparative cross-sectional study

Teklemichael Gebru and et’al

The authors have done well in addressing the reviewer’s comments and revising their paper in a thorough and well considered manner.

Minor essential revisions
1. Language editing: still the document needs language edition by a native speaker or an expert.

Discretionary revisions
1. The author’s said they have used “stratified multistage simple random sampling technique” but I never come up with such a sampling technique. Please check it again. I prefer multistage sampling technique.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
