Reviewer's report

Title: Risk factors of diarrheal disease in under-five children among health extension model and non-model families in Sheko district rural community, Southwest Ethiopia

Version: 6  Date: 27 March 2014

Reviewer: Aderaw Anteneh

Reviewer's report:

Major Compulsory Revision

In the current version of the paper the authors tried to address the comments given satisfactorily. But I have a comment on the references, some of the references are not written properly. Please check again how references are written in BMC journals.

For example, reference 7 should not be written like that the correct one is:
CSA and ORC Macro (2006). Ethiopian Demographic and Health Survey 2005, Addis Ababa, Ethiopia and Calverton, Maryland, USA.

There are also many references in your document that are written wrongly.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
