Reviewer’s report

Title: Correlates of stunting among children in Ghana

Version: 4 Date: 21 February 2014

Reviewer: Olukemi Amodu

Reviewer’s report:

The manuscript is much improved. The statistical methods are better described and the results are more focused. The discussion is also much improved.

1. Minor Essential Revisions

The discussion can still be improved upon. It is not enough just to reference findings from previous studies. The findings of this study should be discussed in relation to previous studies done either to corroborate or contradict. e.g "Children with many siblings are more likely to suffer from malnutrition (14,21). This could be due to the large level of consumption of resources in the household. Our study corroborates this, we observed a significant relationship between........

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
