Reviewer's report

Title: Compliance Potential Mapping: A Tool to Assess Potential Contributions of Walking Towards Physical Activity Guidelines

Version: 5 Date: 26 April 2014

Reviewer: Ugo Lachapelle

Reviewer's report:

The reviews provided by the authors have clarified many of my and the other reviewer's concerns and have strengthened the presentation of the methods and results in the manuscript. The manuscript reads much better as it stands. However I was not able to find a point-by-point reply to the actual comments.

Do make the following minor but essential revisions in a last draft:

Review sentence structure line 81 to 83.
Change title on line 88 to better reflect what is being discussed and to not have the same title as line 105. Par. Below l.105 seems slightly repetitive.

I note that although it seems like a few new references were added, ref 15 and 22, 17 and 18, 20 and 29 are the same. There are possibly others. Please review this.

There are still a few language issues that should be reviewed but overall, I am satisfied with the changes and clarifications.

With these slight modifications, I believe the manuscript will be an interesting contribution.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
