Reviewer's report

Title: Reimbursement of hormonal contraceptives and the frequency of induced abortion among teenagers in Sweden

Version: 1 Date: 10 February 2014

Reviewer: Olabisi Loto

Reviewer's report:

This study looks at the relationship between the reimbursement of hormonal contraceptives and the frequency of Induced abortion among teenagers in Sweden.

Minor essential revision:
The manuscript need to be reviewed for editing errors such as in the result section of the abstract where the and is missing between contraceptives and rates.

Discretionary revision:
The study findings is of interest to stakeholders, however I think the study could be enriched with the adoption of both quantitative and qualitative approach, such as including some focus group discussions (FGDs) with the teenagers which will unearth the real reasons why reimbursement alone may not be enough to reduce the rate of induced abortion among them.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
I declare that I have no competing interest.
