Reviewer’s report

Title: Disparity of anaemia prevalence and associated factors among rural to urban migrant and the local children under two years old: a population based cross-sectional study in Pinghu, China

Version: 3
Date: 20 May 2014

Reviewer: Marly A Cardoso

Reviewer’s report:

Major Compulsory Revisions

There is no reason for not using Prevalence Ratios in this study. The authors could review the literature searching for more recent articles on the use of logistic regression models in cross-sectional studies as nowadays is quite simple to perform such analysis. For instance, I recommend the article:

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:

None to declare.
