Reviewer’s report

Title: Disparity of anaemia prevalence and associated factors among rural to urban migrant and the local children under two years old: a population based cross-sectional study in Pinghu, China

Version: 4 Date: 1 June 2014

Reviewer: Marly A Cardoso

Reviewer’s report:

The authors made major improvements but they are still using "odds ratio" for prevalence ratio on page 7 (statistical analysis). Also, on page 7, they have mentioned 'prevalence rate ratio' for prevalence ratio (using the same abbreviation PR) - are they the same PR? Please, check that out also in Tables.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
