Reviewer’s report

**Title:** A Randomized Study of Contingency Management and Spirometric Lung Age for Motivating Smoking Cessation among Injection Drug Users

**Version:** 2  **Date:** 12 May 2014

**Reviewer:** Ayodeji Awopegba

**Reviewer’s report:**

Minor essential revisions
This is a well-written paper and it certainly helps move the field of tobacco cessation forward. However, I have a few suggestions on how this paper can be improved on:

1. Please include a line on the strength of this study before proceeding to outline the limitations.
2. How substantial was the small sample size in limiting the results of the study? Was a power calculation done to determine that appropriate sample size for the study?
3. In a line or two, clearly elucidate the policy implications of these findings.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** Yes, and I have assessed the statistics in my report.

**Declaration of competing interests:**
