Title:A Randomized Study of Contingency Management and Spirometric Lung Age for Motivating Smoking Cessation among Injection Drug Users

Version:2 Date:17 June 2014

Reviewer:Ahmed Jamal

Reviewer's report:

Major Compulsory Revisions: None

Minor Essential Revisions:

On page 6 (line 108 & 109), the manuscript mentioned "Eligibility requirements included current smoking (defined as regular smoking in the last month),...."

1. The definition of "current smoking" could be more specific.

For example, a) current smokers were respondents who reported smoking #100 cigarettes during their lifetime and, at the time of interview, reported smoking every day or some days, or b) used tobacco products on at least 1 day during the past 30 days.

2. Also, the definition of "current smoking" didn't specifically indicate what type of tobacco products used. For example, a) use of cigarettes, or b) use of combustible tobacco products (cigarettes, cigars, pipes, bidis, or kreteks).

Discretionary Revisions:

On page 6 (line 109-111), the manuscript mentioned "...no current use of nicotine replacement therapy or other smoking cessation pharmacological treatments,..."

1. It would be nice if other smoking cessation pharmacological agents were specifically listed here (preferably, in parentheses).

For example, (bupropion, varenicline).

2. Did the exclusion criteria include only FDA-approved smoking cessation pharmacological agents?

Level of interest:An article of importance in its field

Quality of written English:Acceptable

Statistical review:Yes, and I have assessed the statistics in my report.
