Reviewer's report

Title: Difference of the associations between self-rated health and demographic characteristics, lifestyle, and psychosocial work environment between two representative types of Chinese worksite

Version: 4 Date: 24 July 2014

Reviewer: Thanh Tran

Reviewer's report:

The authors must be consistent in using the term "type of work" and "types of work."
This sentence "Self-rated health (SRH) is generally assessed using a single survey..." sounds confusing...

It would be better to say: SRH is generally assessed by a single item index or a single survey question...

More editorial assistance is needed...

Level of interest: An article of importance in its field

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: Yes, and I have assessed the statistics in my report.
