Reviewer’s report

Title: Helicobacter pylori infection in pregnant women in four districts of Uganda: role of geographic location, education and water sources

Version: 1 Date: 6 July 2014

Reviewer: Ishag Adam

Reviewer’s report:

Major compulsory
It is a long non-compact manuscript
Authors have to focus on prevalence and associated risk factors of H. pylori during pregnancy.
The first paragraph which is not related directly to the topic can be omitted. Likewise the method is vague and long and need to be summarized.
Results it has been mentioned that education and residence are protective factors, I suggest to reword it to look the reverse that illiteracy (low educational level) and urban residence are associated with H- pylori
References are not is the journal format and it is long list that have to be shortened.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
