Reviewer’s report

Title: A Comparison of a Social Support Physical Activity Intervention in Weight Management among Post-partum Latinas

Version: 3 Date: 20 August 2014

Reviewer: Lorraine Walker

Reviewer’s report:

Major Compulsory Revisions
In the report of Results pertaining to Energy Intake, the authors state the control group had a higher saturated fat intake than the intervention group, but the data in Table 3 indicate that these results are actually the opposite: the control group % saturated fat was 10.1, 9.9, and 9.5% versus the intervention group saturated fat% of 10.6, 10.3, and 11.0%. Thus, the text should be corrected.

Discretionary Revisions
The authors stated they joined the first 2 paragraphs in the Background, but seemed to have omitted doing so.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
I was a consultant as this study was being initiated.
