Reviewer’s report

Title: Information and communication technologies for approaching smokers: A descriptive study in primary healthcare

Version: 3  Date: 3 December 2014

Reviewer: Raquel Paz Castro

Reviewer’s report:

The authors have really improved the quality of the article based on the different review comments. At this point I only have a few minor points for revision.

Minor Essential Revisions

In section ‘results’, second paragraph, they affirm that they didn’t find any statistically significant differences on smoking environment, but table 1 shows that there are for a smoking partner and presence in the home. There is also a significant difference in chronic medication intake, which they didn’t mention. (In the next sentence they wrote 70.4% instead of 74% for sms total use).

In section ‘principal findings’ they should split the bracket (17.9 (15.0 (SD: 8.80) ... ) to improve legibility.

In section ‘conclusions’ they should replace TIC for ICT.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
