Reviewer's report

Title: Interaction among general practitioners age and patient load in the prediction of job strain, decision latitude and perception of job demands

Version: 4 Date: 11 November 2004

Reviewer: frans nijhuis

Reviewer's report:

General
The article is worthwhile to be placed. A reread in English would lead to some improvements.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

The authors have to look to the summary. It is not content related. Give the relations in words and not in statistics.
The same stays for the results it would be better to describe the relation somewhat more extensive. Lots of the meaning is lost through the shortage of the results and the explanations.

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No
