Reviewer's report

Title: Strategies to Prevent HIV Transmission Among Heterosexual African American Men.

Version: 3 Date: 1 November 2004

Reviewer: Amy Wohl

Reviewer's report:

General
The suggested revisions were clearly addressed by the authors. One suggestion would be to address the issue of heterosexually-identified men and their sexual relationships with other men in the discussion section. Although this topic wasn't addressed in a lot of detail in the focus groups, it is a potential source of infection for straight-identified African American men and should be considered when developing interventions for heterosexual African American men.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests
