Reviewer's report

Title: The influence of in-pregnancy smoking cessation programs on partner quitting and women's social support mobilization. A randomized controlled trial.

Version: 4 Date: 6 June 2005

Reviewer: Laurence Moore

Reviewer's report:

General
The authors have responded satisfactorily to my previous comments.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Abstract: Final line, rather than 'could try smoking cessation for both partner...' should be something like 'could aim to encourage smoking cessation for both partner...'

Partners smoking status often appears without the apostrophe, for example twice on page 13.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
