Reviewer's report

Title: Male gonadal dose of ionizing radiation delivered during X-ray examinations and monthly probability of pregnancy: a cross-sectional study.

Version: 1 Date: 7 November 2005

Reviewer: louise parker

Reviewer's report:

General
This is a well written report of a well executed study investigating the time to pregnancy in relation to male gonadal irradiation

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
The authors should discuss the magnitude of the effect which the study is powered to detect - especially with regard to doses over 10 mGy.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No
