Reviewer's report

Title: Highly Active Antiretroviral Treatment and Health Related Quality of Life in South African adults with Human Immunodeficiency Virus infection: A cross-sectional analytical study.

Version: 3 Date: 25 May 2007

Reviewer: PREAU Marie

Reviewer’s report:

The question posed by the authors is important and well defined. The 4nd sentence of the introduction section is not clear. Methods are appropriate and well described, scales used are appropriate (more specifically quality of life measurement). Data are sound and well controlled. It seems important to present cronbach alpha for each domains of the EuroQol. Discussion and conclusions are well balanced and adequately supported by the data and have important implications for the follow up of patients and decisions of institutions. Title and abstract are accurately convey what has been found? The writing is acceptable.

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
