Reviewer’s report

Title: Consistency Between Education Reported in Health Survey and Recorded in Death Certificate

Version: 2 Date: 19 September 2007

Reviewer: Robert Anderson

Reviewer’s report:

General
This manuscript is much improved.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
The authors added a sentence in response to my point #3 - “No significant difference in odds ratio was found for gender, age, duration between health survey and deaths, and cause of death, partly due to small sample size” (page 9, line 19-21). I suggest changing the word "partly" to "likely in part" - or something like that.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
