Title: Life style related to blood pressure and body weight in adolescence: Cross sectional data from the Young-HUNT study, Norway.

Version: 2 Date: 14 January 2008

Reviewer: Henrique Barros

Reviewer's report:

After carefully reading the paper and the reviewers comments I do think that it will be worthwhile to give the authors a chance to answer the questions raised. In fact, it is a large population based study that suffers from the traditional limitations of cross-sectional approaches when the aim is etiological but it can add interesting information if data are properly assessed. A deeper statistical evaluation seems desirable.
