Reviewer's report

Title: Epidemiology and health economic analysis of injury in Shandong Province, China

Version: 7 Date: 1 February 2008

Reviewer: Mei Wen

Reviewer's report:

Major Compulsory Revisions
The main description is on epidemic features. Suggest taking health economic analysis off from the topic, since there was only one short paragraph on it. If included, there needs more description and interpretation from the economics side.

The goodness of fit test in Table 5 showed a poor fit, indicating model prediction is significantly different from observed values, some discussion may be needed here, and the relationship might be non-linear.

Minor Essential Revisions

Discretionary Revisions

Please check the inconsistency of the numbers in the description and the tables.

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
