Reviewer’s report

Title: Sun protection for children with oculocutaneous albinism in South Africa; health policy issues

Version: 2 Date: 6 March 2008

Reviewer: Marie-France Demierre

Reviewer’s report:

The authors present their findings on actual sun protection for children with oculocutaneous albinism. This work is important.

1. Major Compulsory Revisions: the conclusion needs to be shorter, more concise, with first the key findings, how these build on earlier work, limitations and future policy directions.

2. Discretionary Revisions: the title could reflect the actual findings, e.g. Lack of adequate sun protection in children with oculocutaneous albinism in South Africa.

What next?: Unable to decide on acceptance or rejection until the authors have responded to the major compulsory revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
