Reviewer’s report

Version: 2 Date: 1 July 2008

Reviewer: Christopher K Fairley

Reviewer’s report:

1. In this case the comments from the reviewer who looked at it again are minor. It would be worth asking the authors to address them*

2. On the ethical issue – the authors should be asked to include in the manuscript how they determined that the study was ethical- this should include the fact and reference for the observation that anonymous questionnaires don’t require ethics, that studies done over seas don’t and the local process for ethics. I would seek a full paragraph in the methods addressing this issue.
