Reviewer's report

Title: Evidence, Theory and Context: Using intervention mapping to develop a worksite physical activity intervention

Version: 1 Date: 12 June 2008

Reviewer: Stef Kremers

Reviewer's report:

This paper presents a nice overview of the systematic development of an intervention to increase worksite physical activity. The paper is well written, conceptually sound, and grounded in theory. I fully agree with their general conclusion regarding the consequences of developing theory based interventions with respect to funding policies. To be complete, the authors may consider to make all Intervention Mapping matrices available through the internet, and include a link to it in this paper.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
