Reviewer’s report

Title: The impact of overweight and obesity on health-related quality of life in childhood - results from an intervention study

Version: 2 Date: 22 November 2008

Reviewer: Juliana Kain

Reviewer's report:

The quality of the MS has improved, especially regarding the characteristics of the intervention. There are still some methodological concerns, which I believe cannot be addressed, because of the study design, for example the Nº of sessions that each child attended cannot be contrasted with the results of the questionnaire. The other reviewer suggested providing in addition to t test in Tables 2 and 3, other exploratory results, which I agree.

Some English editing is still needed

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
