Reviewer's report

Title: How effective is good domestic kitchen hygiene at reducing diarrhoeal disease in developed countries?: A systematic Review and reanalysis of the UK IID study

Version: 3 Date: 10 October 2007

Reviewer: Stephen R Palmer

Reviewer's report:

The authors have addressed the queries. However, the authors' conclusion in the abstract states "that public health messages should be directed at encouraging adequate cooking of raw foods". This comment is not justified by any specific discussion in the text.

Also, there are a number of grammatical errors in the discussion and spelling and a numerical error within the text.

General

-------------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-------------------------------------------------------------------------------------------------------------------------------

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
