Title: Adolescents’ health and health behaviour as predictors of injury death - A prospective cohort follow-up of 652,530 person-years

Version: 2 Date: 29 October 2007

Reviewer: Matti Hillbom

Reviewer's report:

General

====================================================================================================

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Please, check and correct the percentage figure on Results, para 2 ...72 (0.5% should be 49.3 %) and ...74 (0.5% should be 50.7 %). It is also curious that after omitting 14 subjects you still have exactly the same figures in Table 4 as you showed before! This suggests that a perfunctory revision has been performed.

====================================================================================================

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

====================================================================================================

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
