Dear Dr Todd,

Re: Psychological and behavioural factors associated with sexual risk behaviour among Slovak students

Below are my comments for this paper which was submitted for potential publication in your journal.

Discretionary Revision:

Behavioural factors:

1. Don’t you think it will be better to classify the level of drunkenness instead of just using the word “been drunk”? (page 6 para 1)

Minor Essential Revision:

Table 1:

2. Do you mean “Binge drinking at least once per week” or Binge drinking at least once per month?

Method:

3. What type of random sampling was done? It sounds like stratified sampling. How was it done?

4. Were there any inclusion/exclusion criteria for the students?

5. “….. 50 left the room before the beginning or were excluded afterwards because major parts of the questionnaire were left incomplete” (page 5 Para 1). How many exactly returned the questionnaire? (Response rate) and how many questionnaire were left incomplete? (Missing data).

Measures:

6. What is your definition of short relationship? (page 5 Para 2)
Yours sincerely
S.N. OBI

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
