Reviewer’s report

Title: Correlates of quality of life of pre-obese and obese patients: a pharmacy-based cross-sectional survey

Version: 3 Date: 26 June 2009

Reviewer: Thomas von Lengerke

Reviewer’s report:

I finally agree with the authors in that modifying the manuscript according to my comment 1. of my first review would eventually make it another paper. At the same time, the fact that this other paper has not resulted from the revision processes (which after all I fully accept) leaves me with my very first evaluation that the paper’s main results and conclusions - as summarized in the abstract - do not add sufficiently new insights to the field of inquiry. Therefore, I do not think that additional comments on my side would really be of any added value to the authors, and choose to complete my reviewing in this context with a final next step advice.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
